TC421 With WIFI time programmable controller

Upper machine instructions

1. When using the controller on the computer for the first time or when the download mode cannot connect to the controller, the computer should be searched by the controller. Click on the "control" menu bar suche nach usb-gerat (if you have used the same controller on this computer before, you can use it without searching).

5. File copy note

The project file and the mode file need to be copied together, otherwise the copy file is invalid. as follows:

The above picture MyType. 1cm is the project file, and Mode_x. 1mf is the mode file.

Note: the PC side does not support adding the controller to the router. If you want to add the controller to the router, please add and operate the controller via the mobile phone.
